# **ORDERING INFORMATION**

In order to ensure that your orders are processed without delay, we recommend that all purchase orders include the following information:

- P.O. Number
- PENSAFE Part Number
- Customer Part Number
- Quantity required
- Unit Cost

- Sold to Address
- Ship to Address
- Required Delivery Date
- Method of Transportation Ground, Air or Ocean
- Carrier/Courier and corresponding Account Number
- IRS Number (United States only)

# Please request box quantity for optimal ordering.

All goods are supplied subject to our standard conditions of sales which are available upon request and are supplied with each order acknowledgement.

VISA Visa Payments are accepted.

Note - PenSafe reserves the right to adjust pricing at any time.

# CONTACT INFORMATION

**PENSAFE Inc.** and Customer Service personnel are available to assist you with any of your sales or technical questions between the hours of 8:00am to 4:30pm Eastern Standard Time, Monday through Friday.

Mailing Address: **PenSafe Inc.** Telephone: 905-643-7188

 1175 Barton St.
 Toll Free(North America):
 866-212-2211

 Stoney Creek, Ontario

# RETURN POLICY

All returns require prior authorization from PENSAFE Inc. Please contact your Customer Service Representative to discuss the nature of the return and to obtain an RMA Number for tracking and processing.

Reference to the RMA Number should be noted on all documents accompanying the equipment returned in order to properly identify and process as soon as possible.

All returns that are not resultant from manufacturing defects are subject to a 30% restocking charge and are subject to final inspection and approval upon receipt.

Additional charges may apply based on the condition of the equipment returned.

Appropriate credits will be issued upon verification of counts, inspection and final approval of the equipment received.

Page 1 PENSAFE

# COMMITMENT TO QUALITY

Our commitment to quality is not only a function of our Product Integrity Department but a commitment of every employee. Our ISO 9001 certified operating system has not only streamlined all facets of our business but has also given us a focus towards a formalized continuous improvement program. This continuous improvement program enables us to fine tune our products and processes which in turn benefit our Customers.

All of our new products are rigorously tested during the design stage to ensure conformance to current revision of the appropriate National and International Standards (i.e. CSA Z-259.12-, ANSI/ASSE Z-359.19-, NFPA 2500 (1983), 2022 ED, EN 362:) even before production begins. Our facilities in Canada and Asia are CSA certified.

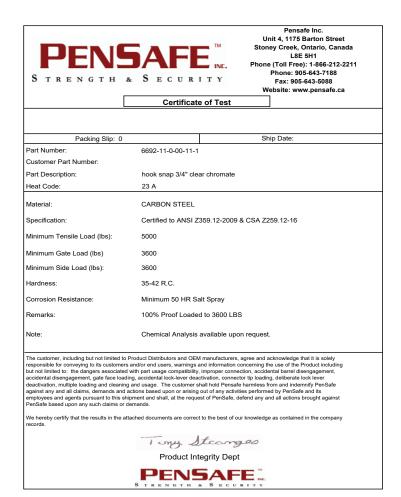

Testing of product during production begins at the raw material stage and continues throughout processing. All test data is traceable to the end product and continuously monitored to ensure an optimum finished part.

Methods of test include:

Magnetic Particle Inspection
Liquid Penetrant Inspection
Dimensional Verification
Hardness Testing
Tensile Testing
Visual Analysis
Functional Analysis (if applicable)

All product shipments include a "Certificate of Test" for each part number included in the shipment. This "Certificate of Test" formally outlines the specifications that the part meets or exceeds and is our written Guarantee of Product Integrity.

# MARKINGS ON SAFETY COMPONENTS

# **Salt Spray Application**

Our standard finishes exceed the minimum Salt Spray resistance as required by the the current revision of the applicable national and international standards. Specific finish corrosion resistance is available upon request.

Minimum order quantities apply for optional finishes, please contact Customer Service for details and availability.

# **Specifications**

- 6692 3/4" Snap Hook
- Drop Forged Steel
- 100% proof loaded to 3,600 lbs (16 kN)
- Min tensile strength 5,000 lbs (22.2 kN)
- Min gate strength 3,600 lbs (16 kN)
- Min side load strength 3,600 lbs (16 kN)
- Gate marked "3.6m GATE"

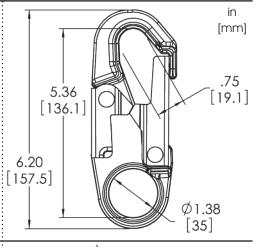

## Certified to:

- ANSI/ASSP Z359.12-2019
- CSA Z259.12-16

#### Meets or Exceeds:

EN362-2004

Weight: 12.27oz (347.9gm)

# **Specifications**

- 9692 3/4" Snap Hook
- Sheet Stamping Steel
- 100% proof loaded to 3,600 lbs (16kN)
- Min tensile strength 5,000 lbs (22.2kN)
- Min gate strength 3,600 lbs (16kN)
- Min side load strength 3,600 lbs (16kN)
- Gate marked "3.6m GATE"

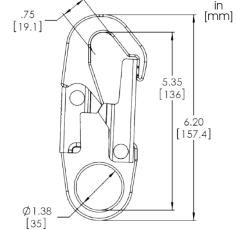

#### Certified To:

- ANSI/ASSP Z359.12-2019
- CSA Z259.12-16

### Meets Or Exceeds:

EN362-2004

Weight: 10.9oz (310gm)

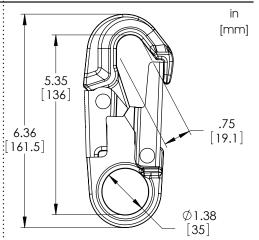

### **Specifications**

- 9695 3/4" Snap Hook
- Drop Forged Aluminum
- 100% proof loaded to 3,600 lbs (16 kN)
- Min tensile strength 5,000 lbs (22.2 kN)
- Min gate strength 3,600 lbs (16 kN)
- Min side load strength 3,600 lbs (16 kN)

### Ovalock Kwiklock Mechanism

# Ovalock Locksafe Mechanism

# Ovalock Gate System:

When used on a steel carabiner, this steel system is capable of withstanding a minimum load of 5,000 lbs (22.2kN) when applied to any point along the gate. This gate will also meet the requirements of the ANSI/ASSP Z359.12-2019 standard.

Please note that aluminum ovalock gates are not designed as a 5000 lb gate.

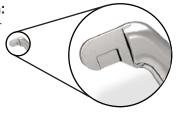

# (1) Keylock Gate System:

Now available. Contact Customer Service for Details.

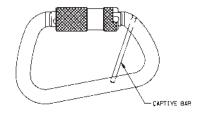

# (2) Hybrid Gate System:

Now available. Contact Customer Service for Details.

# CAPTIVE BARS

# Captive Bars:

Carabiners can be supplied cross-drilled to accommodate Captive Bars. The Captive Bars are not for load bearing use. To order use Part Number + "M." Call for details.

Note that PPE should not be used for lifting materials of any kind.

# ANCHORAGE CONNECTORS

# COMPATIBILITY OF LOCKING SNAP HOOKS WITH ANCHORAGE CONNECTORS

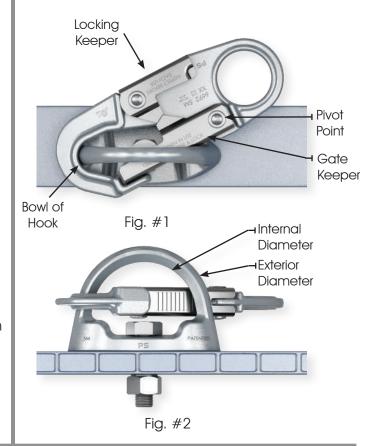

Locking snap hooks should always be used with compatible anchorage connectors. It is strongly recommended that:

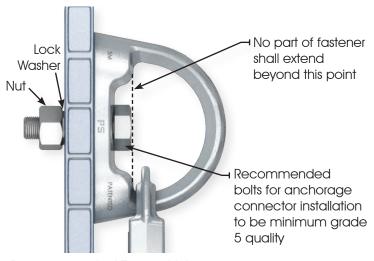

- 1. The design of the anchorage connector must be such that no dynamic force is applied to the keeper system of the locking snap hook (see Figures 1 and 2).
- 2. The anchorage connector system should be configured such that the locking snap hook will self-correct under dynamic loading. The anchorage connector system should never be configured such that dynamic loading could be placed on the keeper system.
- 3. The entire base of the anchorage connector system must be flush with the mounting surface (see Figure 3).
- 4. The area of the mounting surface for the anchorage connector must be such that no dynamic forces can be placed on the keeper system (see Figure 3).

It is the responsibility of the purchaser to ensure that any component utilized is compatible within the system designed and with other components that may be used in conjunction.

**NOTE:** 3731, 3732 and 3742 are tested to the three vector directions; longitudinal, transverse (across the parting line) and straight out.

Example of a compatible connection of a locking snap hook with an appropriate anchorage connector

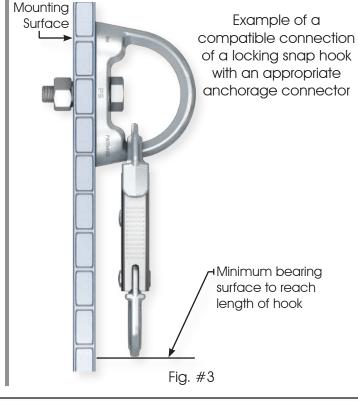

Recommended Torque Values:

65-75 ft-lb for a 1/2" clearance hole (13 TPI Bolt) 145-155 ft-lb for a 5/8" clearance hole (11 TPI Bolt) 240-250 ft-lb for a 3/4" clearance hole (10 TPI Bolt)

Torque values are laser etched along with requirement for a minimum Grade 5 bolt.

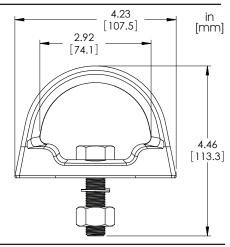

# ANCHORAGE CONNECTORS

# 3731 Assembly

# **Specifications**

- 3732 Anchorage Connector 1/2" clearance hole
- Drop Forged Steel
- 100% proof loaded to 3,600 lbs (16kN)
- Min tensile strength 5,000 lbs (22.2kN)
- Assembly includes a grade 5 structural bolt with nut and lock washer.
- Recommended torque values:
  - 65-75 ft-lb for a 1/2" clearance hole (13 TPI bolt).

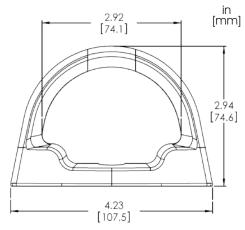

Weight: 20.5oz (580gm)

# **Specifications**

- 3732 Anchorage Connector
- Drop Forged Steel
- 100% proof loaded to 3,600 lbs (16kN)
- Min tensile strength 5,000 lbs (22.2kN)
  Recommended bolts for anchorage
  connector installation to be minimum
  grade 5 quality with lock washer.
- Recommended torque values:
  - 65-75 ft-lb for a 1/2" clearance hole (13 TPl bolt).
  - 145-155 ft-lb for a 5/8" clearance hole (11 TPI bolt).
  - 240-250 ft-lb for a 3/4" clearance hole (10 TPI bolt).

Weight: 16oz (450gm)

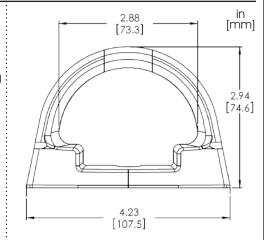

a 5/8" Anchorage Connector

# **Specifications**

- 3742 Anchorage Connector
- Drop Forged Stainless Steel
- 100% proof loaded to 3,600 lbs (16kN)
- 5/8" Min tensile strength 9,000 lbs (40kN)
- 3/4" Min tensile strength 10,000 lbs (44.5kN)
- Only offered in Clear Zinc Nickel to improve corrosion resistance Recommended torque values:
- 145-155 ft-lb for a 5/8" clearance hole (11 TPI grade 9 bolt).
- 125-135 ft-lb for a 3/4" clearance hole (10 TPI 316SS bolt).

Weight: 16.5oz (468gm)

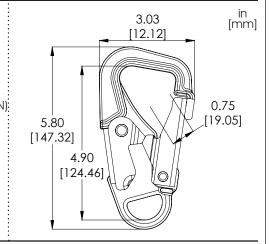

# **Specifications**

- 4856 3/4" Tie Back Hook
- Drop Forged Steel
- 100% proof loaded to 3,600 lbs (16 kN)
- Min tensile strength 5,000 lbs (22.2 kN)
- Min gate strength 5,000 lbs (22.2 kN)
- Min side load strength 5,000 lbs (22.2 kN):
- Gate marked "5000 lb GATE"

# ANCHORAGE CONNECTORS

# **Specifications**

- 9780 Disposable Roof Anchor
- Sheet Stamping Steel
- Min tensile strength 5,000 lbs (22.2kN) when attached as per manufacturer specification
- Available with fasteners and instructions

Weight: 18oz (512gm)

# Warning:

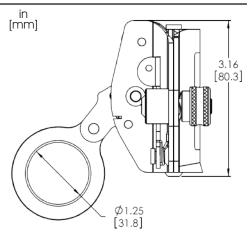

- All users must read and understand all warnings and instructions.
- Only trained personnel shall use this equipment.
- Ensure that all pieces of equipment are compatible with each other.
- The end user must inspect all equipment before each use.
- A "competent person" as defined by OSHA, must inspect all equipment at least annually.
- In the event of a fall, the equipment must be replaced.
- Do not alter any equipment; any repair can only be performed by the manufacturer or authorized personnel.
- The roof anchor must be installed according to instructions supplied using the appropriate 4" ardox nails for the 9780.
- The user must connect to the anchor point using only approved connecting devices
- Ensure that the connector used is firmly connected through both sides of the connecting loop at the top of the anchor.
- This roof anchor is intended for single attachment only.
- This anchorage connector is intended to be installed on wood framed structures capable of withstanding a minimum of 5,000 lbs (22kN) of loading.
- Additional requirements and specifications are supplied with the roof anchor.

# FALL ARRESTERS

# **Specifications**

- 7360 ADP Rope Grab
- Cold Formed Steel
- Min tensile strength 5,000 lbs (22.2kN) Certified To:

### REFERENCE MATERIALS

Why Forge? A cross section of a number of forged connectors shows that the etched grain structure is consistent with the part shape; the connector will have improved resistance to multidirectional vector forces. The shape is enhanced by grain structure.

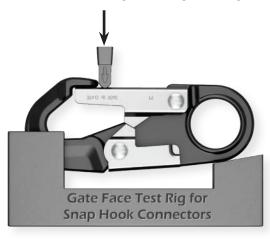

# ANSI/ASSP Z359.12-2019 REQUIREMENTS FOR SNAP HOOKS AND CARABINERS

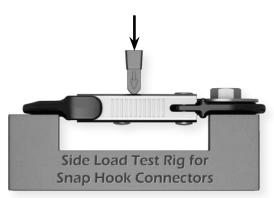

The American National Standard (ANSI/ASSE Z359.1-2007) became effective November 24, 2007. The new standard increased the minimum gate face and side load requirements for connectors to meet or exceed 3,600lb (16kN).

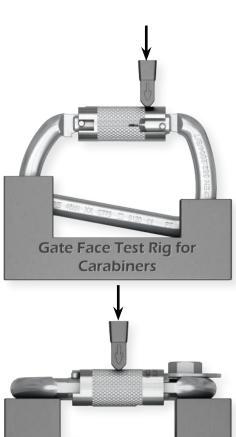

Connectors with non-integral eyes are also required to meet a minor axis gate strength of 3,600 lbs (16kN). The connector gate must be marked with the load rating; the body of the connector must be marked with a major axis load rating. Non-integral connectors are to be clearly marked with ANSI Z359.1.

This standard changed to ANSI/ASSP Z359.12-2019 effective July 6, 2020 incorporating a dynamic drop test requirement. With the New CSA standard Z259.12-11 the Canadian and US standards are harmonized with respect to the requirements for connectors.

### **Destructive Testing: Testing Configuration**

Side Load Test Rig for

Carabiners

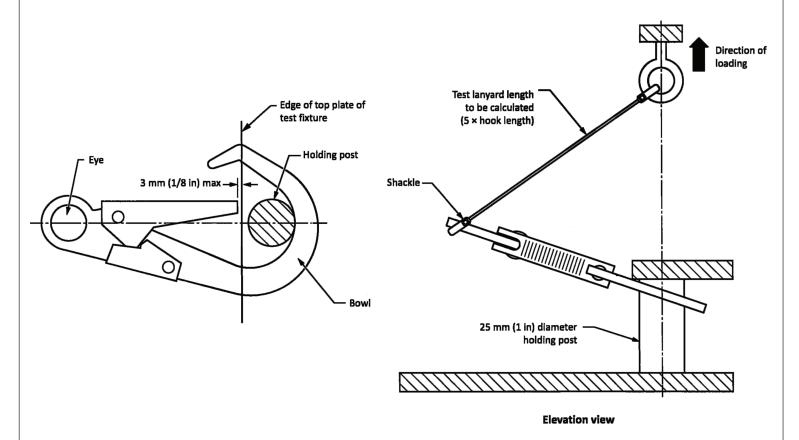

# MINIMUM REQUIREMENTS AS OUTLINED FOR HOOKS AND CARABINERS PER STANDARD

Standard	CSA Z259.12- 01	CSA Z259.12- 11	CSA Z259.12- 16	ANSI Z359.1- 1999	ANSI/ASSE Z359.12- 2009	ANSI/ASSP Z359.12- 19	EN 362:2004	NFPA 2500 (1983), 2022ED

<sup>\*</sup> New Standards require Minor Axis Loading for connectors with non-integral eyes.

# TRANSVERSE BODY LOADING TEST FIXTURE (STATIC)

<sup>\*\*</sup> EN: Basic Connector 1575 lbs (7kN); Multi Use Connector 3378 lbs (15kN)

<sup>\*\*\*</sup> NFPA: Light Use... Major Axis gate closed 6069 lbs (23kN); Major Axis gate open 1574 lbs (7kN); Minor Axis 1574 lbs (7kN)
General Use... Major Axis gate closed 8922 lbs (39.7kN); Major Axis gate open 2473 lbs (11kN); Minor Axis 2473 lbs (11kN)

<sup>\*\*\*\*</sup> New standard require Transverse Loading for connectors with opening one inch or larger

PENSAFE Inc. is constantly seeking new ways to improve the specifications, design and production of it's products. Alterations take place continually; therefore, this catalogue should not be regarded as an infallible guide to current specifications. All goods are supplied on the condition that the purchaser does all that is reasonably possible to ensure that the user of the equipment is competent in it's use. We trust that the descriptions contained in this catalogue will be of assistance and should not be considered a substitute for correct training by qualified personnel.

Product distributors and OEM manufacturers should make all users aware of the following information.

No Connector is to be used in a connection where the gate keeper may be loaded. Care must be taken to avoid loading the connector across the gate, particularly over edges or other obstructions. Please check the anticipated orientation during loading before use.

Connectors and anchorages should be selected to ensure there is appropriate dimensional and configured compatibility. Connectors are not to be connected to another connector. No more than one connector should be connected to any connection point at one time unless this has been specifically designed for and authorized; compatibility and interference must be considered. No foreign items should be used in conjunction with a connector. Connectors are utilized in a variety of fall protection equipment systems. Always verify before use that your equipment consists of products compatible with each other and in conformity with the applicable regulations, standards and directives in force. Where fixed anchorages are used they should be selected to ensure that the connector gate and/or connector locking mechanism cannot be compromised. Gate size as compared to the intended anchorage must be considered before intended use. Connectors with gate openings greater than one inch must not be connected to d-rings or d-ring anchorage connectors. Connectors must be connected such that in the event of a fall, the connector is loaded on its major axis. Loading of connectors in any orientation other than that of the major axis may result in the failure of the connector.

All connectors should be cleaned and lubricated periodically as per PenSafe instructions. If cleaning and lubrication does not result in a perfectly functioning connector, replace the connector immediately. Connector obsolescence is related to use and storage conditions; generally, connectors are conservatively estimated to have a useful life of five years or less.

If you are in any doubt whatsoever about the safe condition of the connector replace it immediately. During use the gate keeper must close and lock. If the connector has been used to arrest a fall it shall be withdrawn from use and destroyed. Also verify that the system has been properly assembled and that each component functions without interfering with any of the other components. Immediately before use, visually and functionally inspect to ensure that the connector is in a serviceable condition and operates correctly. There must not be any signs of wear, corrosion, deformation or defects in general. It is the user's responsibility to ensure that he/she understands the correct and safe use of the connector. Connectors are designed for normal climatic conditions. All contact with chemical reagents or other corrosive substances should be avoided. The user must be adequately trained in the appropriate techniques and security measures to be adopted. PenSafe assumes responsibility only for the uses for which the product is designed, and is not responsible for product failure related to poor maintenance, user negligence, or where the product has been modified or repaired by persons not specifically authorized. PenSafe declines any and all responsibility for accidents, injuries or death due to improper application and incorrect use of its products by the user and/or failure to follow the above mentioned instructions.

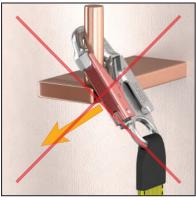

The following depictions illustrate improper usage of connectors in various applications. Care must be taken to ensure that connectors are not used in configurations where the locking mechanism can be compromised or the hook body is subject to deflection or inappropriate stress. Note that these warnings apply to all connectors whether they are certified to, or meet or exceed, the requirements of CSA Z259.12-01, ANSI Z359.12 -2019, EN 362:2004 or NFPA 2500 (1983), 2022 ED.

Connector elements or components which may fail as a result of inappropriate configurations are depicted in red.

### <u>Dimensional & Configured Incompatibility</u>

- Connector and anchorage should be selected such that the gate keeper mechanism is not subject to load.
- Gate size should be appropriate to the size of the anchorage.

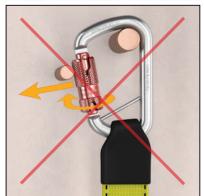

### **Gate Side Loading**

 Ensure working area is free of obstructions which could compromise the gate keeper mechanism.

### **Improper Connection**

- Ensure that hook is compatible with anchorage.
- Gate keeper must close and lock.

### Accidental Barrel Disengagement

• Ensure working area is free of obstructions which could compromise gate mechanism or result in accidental disengagement.

The following depictions illustrate improper usage of connectors in various applications. Care must be taken to ensure that connectors are not used in configurations where the locking mechanism can be compromised or the hook body is subject to deflection or inappropriate stress. Note that these warnings apply to all connectors whether they are certified to, or meet or exceed, the requirements of CSA Z259.12-01, ANSI Z359.12 -2019, EN 362:2004 or NFPA 2500 (1983), 2022 ED.

Connector elements or components which may fail as a result of inappropriate configurations are depicted in red.

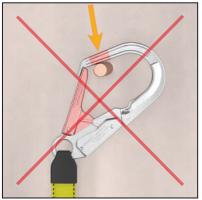

### **Gate Face Loading**

 Ensure working area is free of obstructions which could place a force/load on the face of the gate keeper mechanism.

### **Accidental Lock-Lever Deactivation**

 Ensure working area is free of obstructions which could accidently engage the lock lever mechanism and result in accidental disengagement.

### **Connector Tip Loading**

 Configure application such that gate mechanism and hook tip are not loaded.

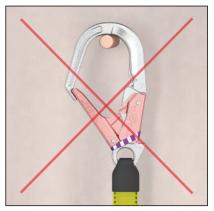

The following depictions illustrate improper usage of connectors in various applications. Care must be taken to ensure that connectors are not used in configurations where the locking mechanism can be compromised or the hook body is subject to deflection or inappropriate stress. Note that these warnings apply to all connectors whether they are certified to, or meet or exceed, the requirements of CSA Z259.12-01, ANSI Z359.12 -2019, EN 362:2004 or NFPA 2500 (1983), 2022 ED.

Connector elements or components which may fail as a result of inappropriate configurations are depicted in red.

### **Multiple Loading**

• Do not subject the hook to multiple forces which could cause hook body deflection resulting in gate failure.

### **Deliberate Lock-Lever Deactivation**

The connector locking keeper mechanism should not be disabled.
